Treasures in a map (1)

P70690_en

Write a program that, given a map with treasures and obstacles, tells if it is possible to reach any treasure from a given initial position. The allowed movements are horizontal or vertical, but not diagonal.

Input

Input begins with the number of rows n > 0 and the number of columns m > 0 of the map. Follow n rows with m characters each. A dot indicates an empty position, an 'x' indicates an obstacle, and a 't' indicates a treasure. Finally, two numbers r and c indicate the initial row and column (both of them starting at 1) where we must start looking for treasures. You can assume that r is between 1 and n, that c is between 1 and m, and that the initial position is always empty.

Output

Print "yes" or "not" depending on whether it possible or not to reach any treasure.

Sample input 1

Sample output 1

..t... ..XXX. tX..X.

7 6

.X..Xt

.XX... ..t... 5 3

yes

Sample input 2

Sample output 2

4 10 ..t...X...x..t. XXXXX....X.t 4 1

no

Sample input 3

Sample output 3

5 7 .XXXXXt .X...Xt .X.X.XX ...X.Xt 5 5

yes
